

PROJECT MANAGEMENT THAT WORKS

YOUR PARTNER THROUGH EVERY
PROJECT PHASE

PROJECT MANAGEMENT SOLUTIONS THAT ADD BUSINESS VALUE

IDEATE

Opportunity Screening

Portfolio Identification

Portfolio Selection

Portfolio Measurement

Choosing which projects to invest in is one of the most consequential decisions an organisation makes. ProjectLink's Ideate Opportunity Screening Solutions help you identify, evaluate, and prioritise the right initiatives to support your strategic objectives. We work with you to uncover new opportunities, assess existing projects against key business metrics, and select those that deliver the greatest impact within your available resources. By also measuring the benefits and outcomes of completed projects, we create a continuous feedback loop that keeps your portfolio aligned with your strategy and focused on delivering measurable business value.

Operational
Readiness

A structured and integrated approach across the concept, pre-feasibility, and feasibility phases ensures that projects are thoroughly evaluated before major investment decisions are made. This process focuses on defining the business need, assessing technical and financial viability, and developing reliable cost, schedule, and execution strategies. Through detailed analysis, risk evaluations, and independent validation, organisations gain greater confidence in project outcomes while reducing uncertainty. The result is a well-defined project supported by a robust business case and a clear execution pathway, enabling a smooth transition into successful project implementation and operations.

Construction
Management

During the project execution phase, disciplined management and clear visibility are critical to delivering projects safely, on schedule, and within budget. Our implementation support combines experienced project leadership, strong construction oversight, and robust project controls to actively manage scope, cost, schedule, and risk. Through real-time performance monitoring, structured governance, and transparent reporting, we help ensure informed decision-making and early intervention when issues arise, while integrating operational readiness and commissioning to enable a smooth transition from project delivery into successful operations.

Post Investment
Review

Business
Improvement

During the Operate phase, we help organisations sustain and improve asset performance by identifying and delivering stay-in-business (SIB) projects that enhance reliability, efficiency, and compliance with minimal disruption to operations. From business case development to execution support, we ensure improvement initiatives are well-structured and deliver measurable value. Post-investment reviews then assess whether expected benefits were achieved, providing insights that strengthen future investment decisions and support continuous operational improvement.

ADDITIONAL SOLUTIONS TO SUPPORT YOUR SUCCESS

Advisory

Enhanced decision-making and project management capabilities through dynamic simulations, value engineering, PMO setup and management, maturity assessments, quantitative risk assessments, and project management training.

Enablement & Resourcing

Ensure your projects have the expertise and capacity to succeed. Our solutions provide skilled project management and project controls professionals, helping you strengthen delivery and quickly meet capacity demands with the right talent to keep projects moving forward.

InEight Partner

We specialise in helping capital project organizations deploy the InEight platform effectively, not just as a system, but as a tool that drives real project performance.
